

EXTERIOR TEXTURED COATINGS

Nuplex is New Zealand's leading manufacturer of high build, high performance, decorative coating systems. Our range of finishes are spray, roller and trowel applied in fine, medium and coarse textures, including natural stone and marble finishes. Nuplex exterior coatings are applied by Nuplex licensed contractors.

FLEXICOTE SMOOTH (ROLLER TEXTURE)

Flexicote is the original and best weatherproofing and texturing system. Flexicote provides a base isolating and waterproofing layer which protects your building against water ingress. Yet it remains very flexible and allows your building to breathe. Manufactured from Nuplex pure acrylic, high performance resins, your coating will last past your expectations.

FLEXICOTE MEDIUM

A variant on the Flexicote system provides the texture and style to your building. Marble aggregates give the texture size and shape. Applied by licensed contractors the texture will be uniform and continuous.

FLEXICOTE FINE

This Flexicote texture provides a more monolithic look to your structure. All Flexicote textures are kept in better appearance by a final glaze application. Check with your contractor and specify colour texture and glaze option. Most colours can be made. Try choosing from the BS525F chart.

FLEXITROWEL

Flexitrowel is our premium drag finish (also called scratch finish). It can be finished in vertical or swirl scratches. Flexitrowel is applied over a base waterproofing coat of Flexicote. For a distinctive house, use Flexitrowel. Flexitrowel cleanability is also enhanced with a glaze application.

NATURAL TROWEL

Natural Trowel provides authentic aggregate finishes in a pure acrylic, durable clear base. These finishes are applied over a neutral tone, waterproofing basecoat. Aggregate colour and texture options are as wide as your imagination.

FLEXIFINE

Flexifine is a very fine, trowel-on acrylic finish. It provides a matt, adobe or sandstone appearance. It is applied over a waterproofing basecoat. Flexifine looks great without a glaze, but satin glazes will improve the dirt pick-up resistance.

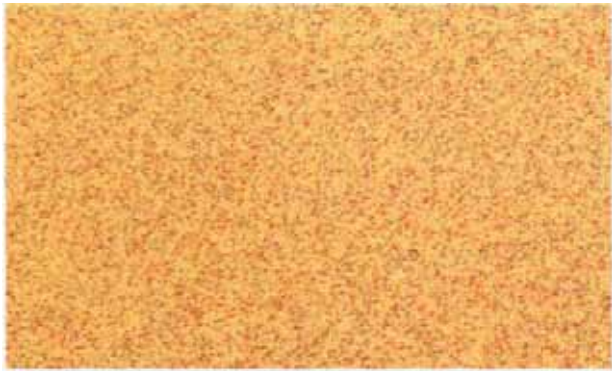

SANDBLAST

Sandblast™ is a round, pebble based acrylic finish. It "rolls off" the trowel to provide a uniform round, aggregate appearance. Sandblast™ is part of the Dryvit™ range of finishes.

SURFAGLAZE (ROLLER/TROWEL FINISH)

Surfaglaze is the premium durability finish for commercial buildings. It is based on a unique combination of acrylic basecoat and polyurethane glaze topcoats. The polyurethane provides unparalleled durability and gloss retention. This gives a building with outstanding cleanliness and appearance. Surfaglaze is the system to use when particularly dark colours are required eg: reds, blues etc. Choose Surfaglaze for cost effective building maintenance.

NB: Surface textures can be varied to suit the application.

COLOURFLEKS

Colourfleks is the face of modern technology to provide bright colour options to textured coatings. Colourfleks uses synthetically coloured silica to provide coloured aggregate options. The pictured sample is but one of many colour options or blends.

FLEXITEX

Flexitex uses widely sourced silica marble, glass and quartz aggregates. These provide the specifier with colour options to match, in an acrylic trowel-on system, equivalent effects to tile form marbles. Colour options are very wide. See your Nuplex representative.

FIBRECEMENT sheet such as Harditex may be jointed with our approved **SJ JOINTING SYSTEM**.

View this data in you Nuplex manual or on **MASTERSPEC**.

LICENSED CONTRACTORS are available to apply your coating. The Nuplex Contractor Federation has around 200 licensed contractors in both the Nuplex Building Products and the Plaster Systems network.

CHOOSING A PRODUCT, simply select:

- a) The coating type
- b) Colour, use Nuplex BS 5252 colour chart or any common colour range system
- c) Aggregate finish
- d) Glazed or unglazed
- e) Request a sample from Nuplex
